

3/4 Science Week of April 29

Monday: Last day to work on research projects in class. I am looking at having a science fair activity for them to present their work to other grades next week.

Thursday: I Create Ice Cream! - We will read this article in the SuperSTEM magazine. This article is about a scientist who makes ice cream for a living, and the science behind it.

Friday: Make Whipped Cream - Students will make whipped cream by putting cold heavy cream into a closed container and shaking it. Students will record observations on how the mixture and volume changed.
